Factors with forcats :: **cheat sheet**

The **forcats** package provides tools for working with factors, which are R's data structure for categorical data.

Factors

levels attribute that stores a set of mappings between R represents categorical data with factors. A **factor** is an integer vector with a

1 1= a 3 2= b 3 3= c stored integer vector levels

displays not the integers, but the values associated with them. integers and categorical values. When you view a factor,

Create a factor with factor()

labels = levels, exclude = NA, ordered = is.ordered(x), nmax = NA) Convert a vector to a factor. Also as_factor. f <- factor(c("a", "c", "b", "a"),
 levels = c("a", "b", "c"))</pre> **factor**(x = character(), levels,

e Q v Ť a 1= a C 2= b D 3= c

Return its levels with levels()

factor. levels(f); $levels(f) \leftarrow c("x","y","z")$ **levels**(x) Return/set the levels of a

Use unclass() to see its structure

Inspect Factors

fct_count(f, sort = FALSE)
Count the number of values
with each level. fct_count(f)

1= a 2= b 3= c e o

fct_unique(f) Return the unique values, removing duplicates. fct_unique(f)

e o u

Ť

Combine Factors

fct_c(...) Combine factors with different levels. f1 < factor(c("a", "c"))f2 < factor(c("b", "a"))fct c(f1, f2)

levels across a list of factors.
fct_unify(list(f2, f1)) lvls_union(fs)) Standardize fct_unify(fs, levels =

Change the order of levels

1= a 2= b 3= c

o o

displayed

fct_relevel(f, ..., after = 0L)
Manually reorder factor levels.
fct_relevel(f, c("b", "c", "a"))

fct_infreq(f, ordered = NA)
Reorder levels by the frequency in which they appear in the data (highest frequency first). f3 <- factor(c("c", "c", "a")) fct infreq(f3) 1= C 2= a

υ U

1= a 2= c

U U G

fct_inorder(f, ordered = NA)
Reorder levels by order in
which they appear in the data.
fct_inorder(f2)

e Q v

fct_rev(f) Reverse level order.
f4 <- factor(c("a","b","c"))
fct_rev(f4)</pre>

fct_shift(f) Shift levels to left or right, wrapping around end. fct_shift(f4) 1 = C 2 = a 3 = b

o o

Ť

1= a 2= b 3= c

вΩυ

fct_shuffle(f, n = 1L) Randomly permute order of factor levels. fct_shuffle(f4) 1= a 2= c 3= b

fct_reorder(.f, .x, .fun=median, .desc = FALSE) Reorder levels by their relationship with another 1= b 2= c 3= a

U - 0

3=0

fct_reorder(Species, Sepal.Width)) boxplot(data = iris, Sepal.Width variable.

plotted with two other variables. fct_reorder2(.f. x, .y, .fun = last2, ..., .desc = TRUE) Reorder levels by their final values when ggplot(data = iris,

color = fct_reorder2(Species, Sepal.Width, Sepal.Length))) + aes(Sepal.Width, Sepal.Length, geom_smooth()

Change the value of levels

forca

1= V 2= X 3= Z > N × >

levels. Also **fct_relabel** which obeys purrr::map syntax to apply a function

 $fct_recode(f, v = "a", x = "b", z = "c")$ $fct_relabel(f, \sim pasteo("x", .x))$

or expression to each level

fct_recode(.f, ...) Manually change

fct_anon(f, prefix = ""))
Anonymize levels with random

integers. *fct_anon(f)*

fct_collapse(.f, ...) Collapse levels into manually defined groups. $fct_collapse(f, x = c("a", "b"))$ $1 = \frac{1}{X}$ $2 = \frac{C}{C}$

×U

1

1= a 2= b 3= c

a D C a

fct_lump(f, n, prop, w = NULL, other_level = "Other", ties.method = c("min," "average", "first", "last", "random", "max")) Lump together least/most common levels into a single level. Also fct_lump_min.

fct_other(f, keep, drop, other_level =
"Other") Replace levels with "other." fct_other(f, keep = c("a", "b"))

Add or drop levels

fct_drop(f, only) Drop unused levels. f5 <- factor(c("a","b"),c("a","b","x")) f6 <- fct_drop(f5)

fct_expand(f, ...) Add levels to
a factor. fct_expand(f6, "x")

fct_explicit_na(f, na_level="(Missing)") Assigns a level to NAs to ensure they appear in plots, etc.

fct_explicit_na(factor(c("a", "b", NA)))
